

The H3K27me3-on-CyclinD1 RACE: EZH2 activity vs replicative dilution (GNP baseline, weak-self-reinforcement / graded regime)

(A) H3K27me3 on CyclinD1 = methylation vs dilution race

high EZH2 + slow division → accumulation; low EZH2 + fast division → dilution wins

(B) Resulting CyclinD1 -- damped in the high-EZH2 / slow-division corner

(H3K27me3 accumulation), high where dilution wins
