

H3K27me3 → CyclinD1 response characteristics — static transfer functions & parameter sensitivity

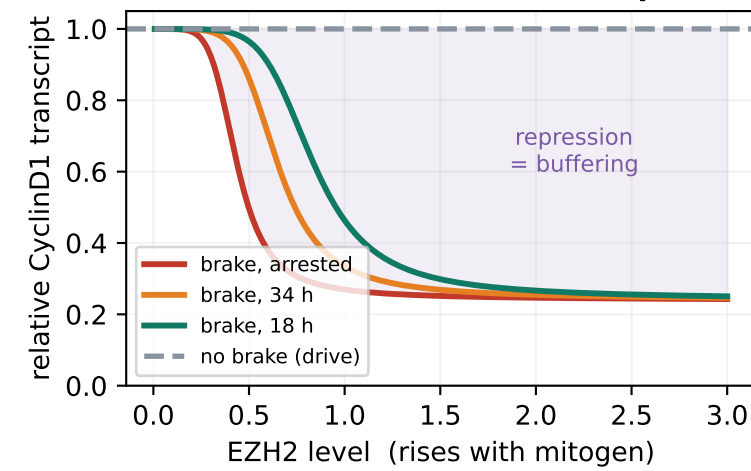

(A) Readout: the mark throttles, never silences (leaky Hill)

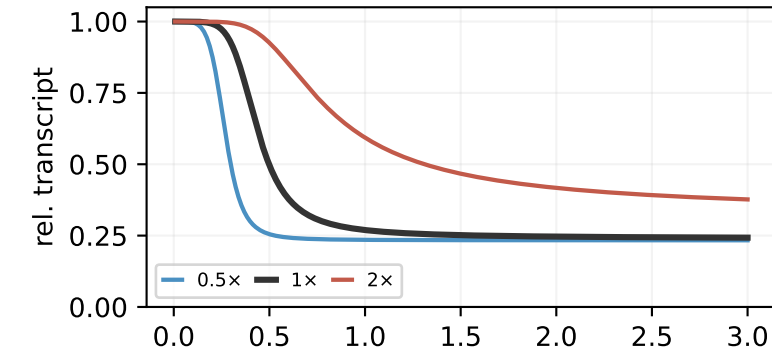

(B) Writing vs erasing: faster cycling dilutes the mark

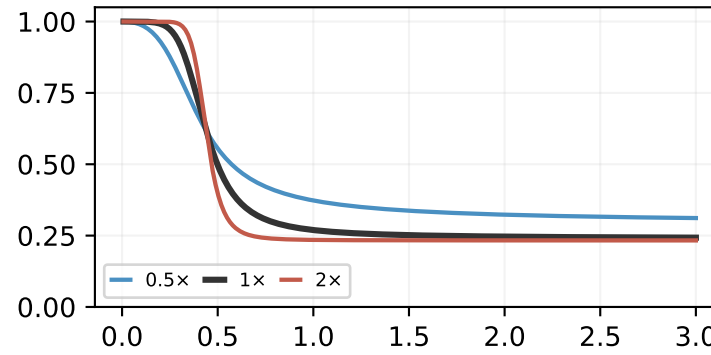

(C) Throttle: more EZH2 → more mark → less transcript

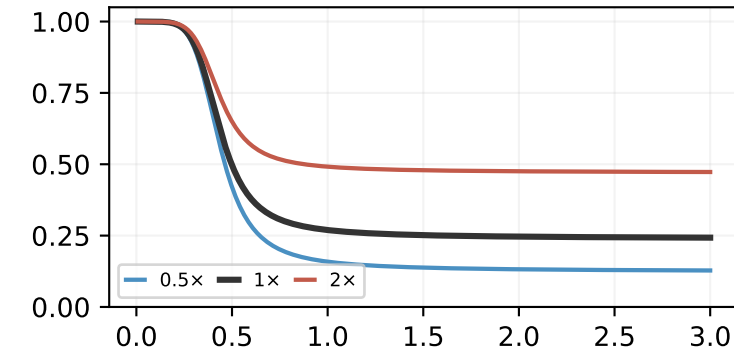

K_{mk} — mark→repression midpoint

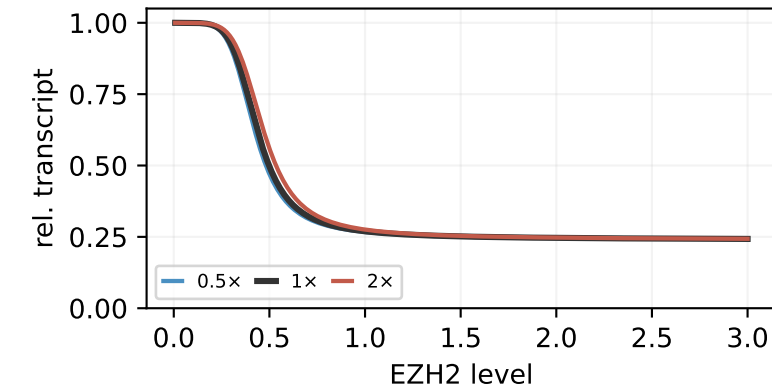

n_{mk} — switch steepness

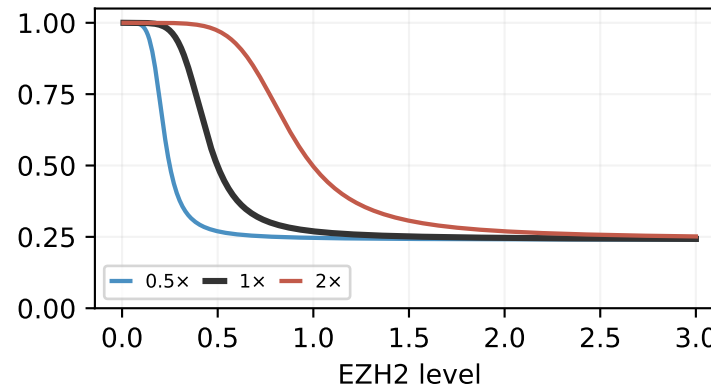

f_0_{mk} — leak floor

g_{mk} — transcription eviction

del_{mk} — demethylation / turnover

k_w_{mk} — read-write autocatalysis
