

TIMING sweep (fine grid) — H3K27me3 kinetics & replicative-dilution frequency vs mitogen-ramp speed → entry/exit hysteresis

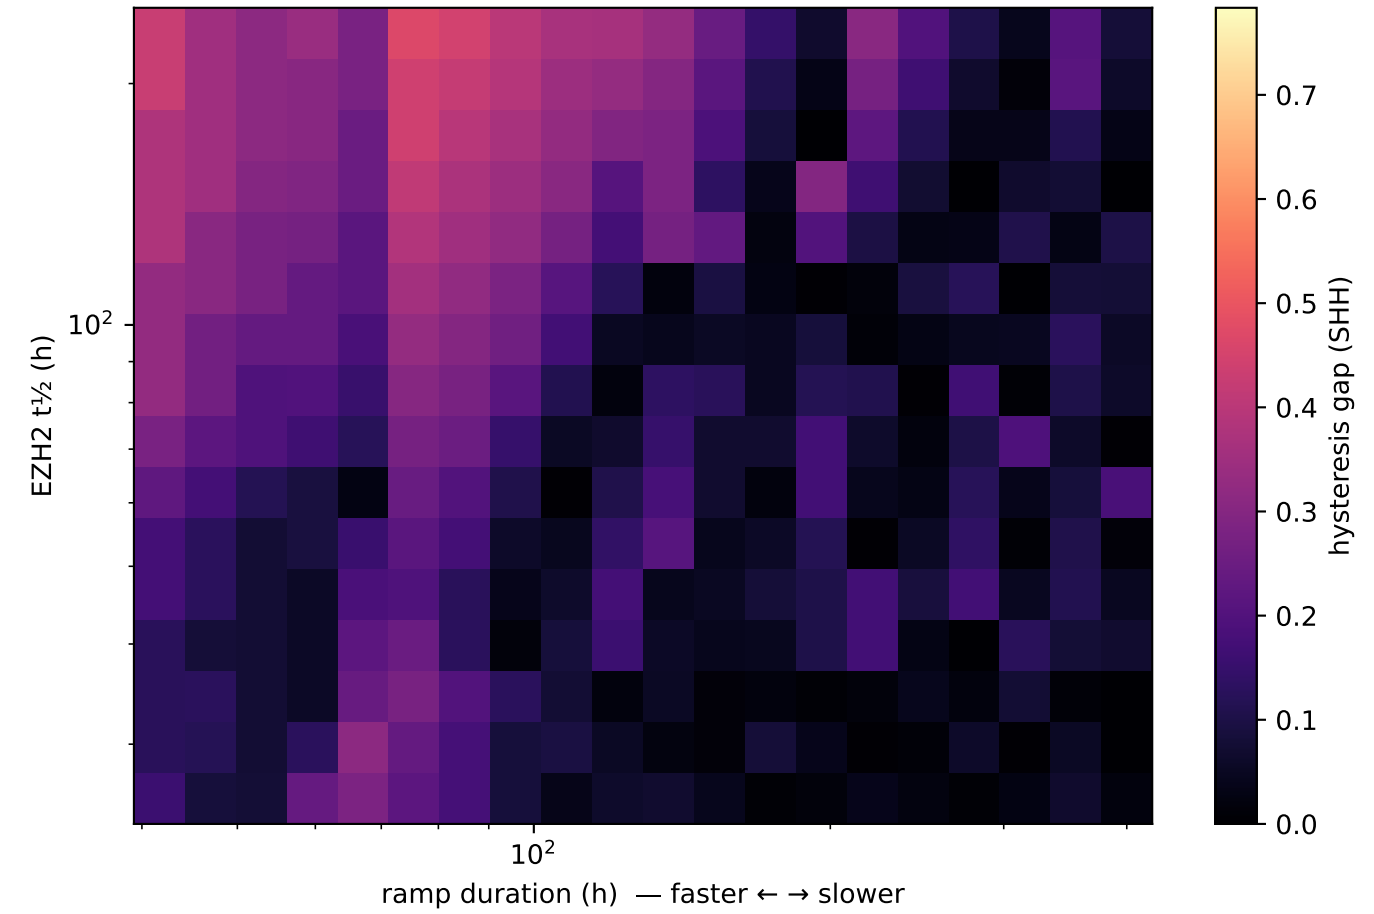

(A) del_mk (mark turnover)

hysteresis |entry – exit| (SHH): biggest at FAST ramp + SLOW kinetics

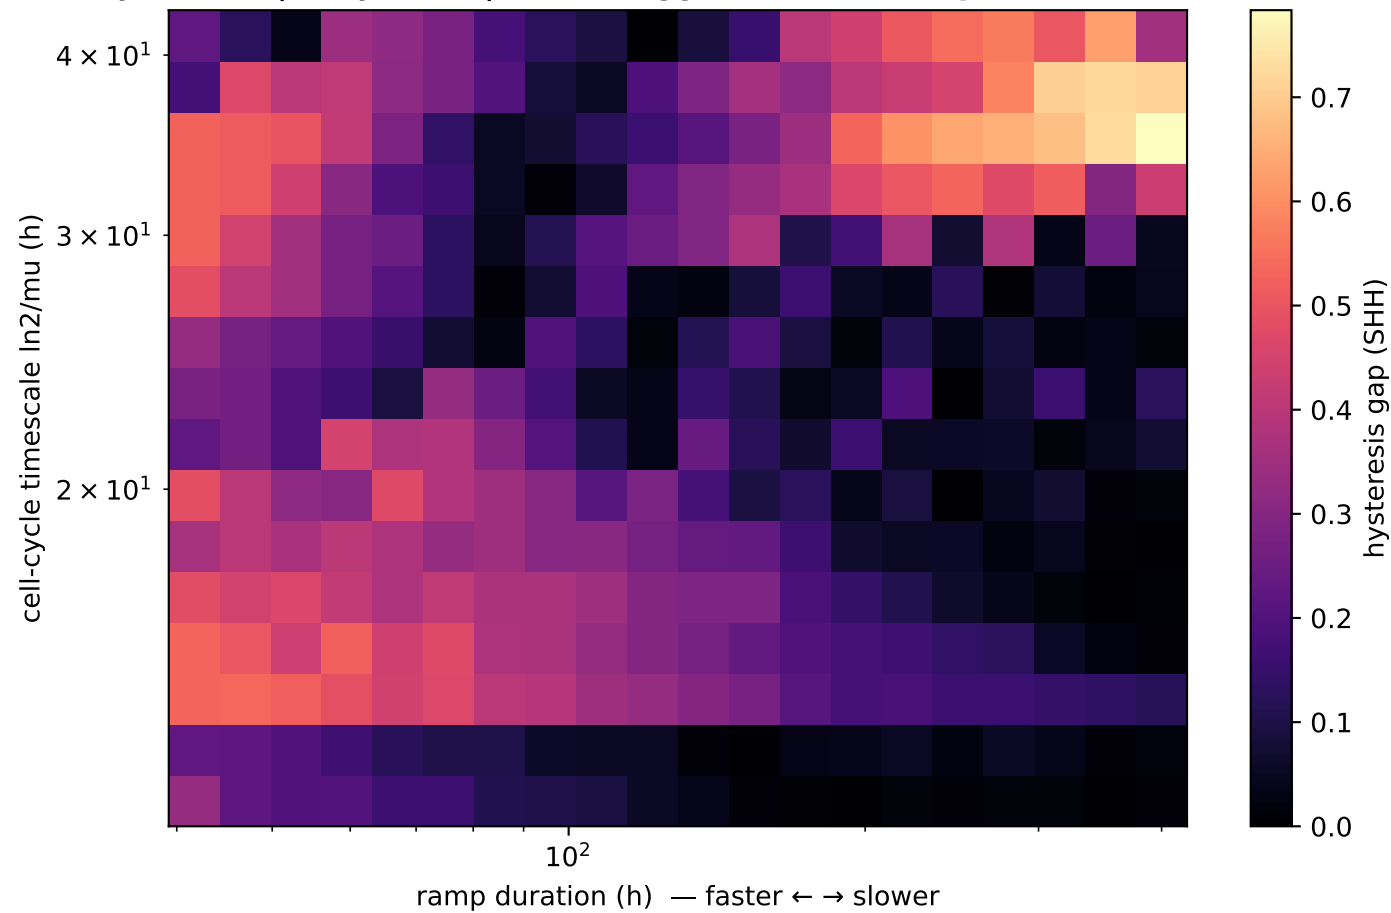

(B) kDeEZ (EZH2 half-life)

hysteresis |entry – exit| (SHH): biggest at FAST ramp + SLOW kinetics

(C) mu (dilution frequency / cycle period)

hysteresis |entry – exit| (SHH): biggest at FAST ramp + SLOW kinetics

(D) Entry & exit threshold vs ramp speed (default timing)

hysteresis widest at fast ramps, closing toward quasi-static
