

GNP mitogen ramp-ON → sustain → ramp-OFF: EZH2, CyclinD1, division — WITH vs WITHOUT H3K27me3 repression (25/27 params)

WITH H3K27me3 repression (real model, 25/27) — the mark raises the entry Hh and buffers CyclinD1

WITHOUT H3K27me3 repression (f0_prc2=1.0) — no mark: CyclinD1 tracks mitogen directly
