

Mother-G2 p27 integrator → graded fate bifurcation across mitogen (ensemble, two-step base)

N=60 cells heterogeneous in mitogen response ($k_{Cd_translation}$, lognormal). Quiescent = arrest + transient-G0 (CDK2low); cycling = immediate (CDK2inc). Exploratory / first calibration.

A. Graded bifurcation: quiescent fraction ↓ with mitogen

B. Fate composition (mother-G2 ON)

C. Dwell distribution at SHH=0.45 (the split)
