

Population layer: GNP vs medulloblastoma transient-G0 -- quiescence-onset vs mitogen + Spencer sister concordance

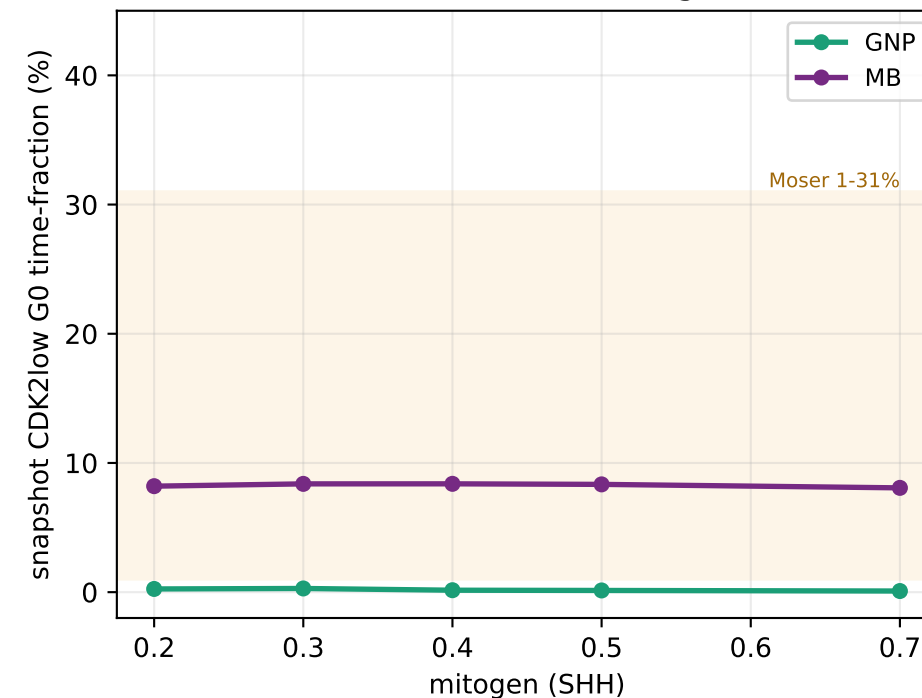

N=100 lineages/type, data-grounded abundance draws (CyclinD1 CV 0.70, EZH2 CV 0.55); birth-p27 CV 0.33 INHERITED (shared by sisters) + small partition noise; MB birth-p27 median 1.39. Panel A/B: flow/Moser-comparable snapshot G0 time-fraction.

(A) Snapshot G0 fraction (SHH=0.5)

GNP ~0 vs an MB quiescent subpopulation

(B) Quiescence onset vs mitogen (SHH)

(C) Spencer sister concordance
