

CDK4/6i washout kinetics: reversible arrest, dose-dependent re-entry

MB population (CyclinD1 CV 0.70 + CKI CV 0.42 + 20% drug-independent reserve); palbo = graded residual CDK4/6 activity. 1 μM holds a partial cycling residual and rebound 5 μM arrests fully and re-enters more slowly (deeper arrest → more p27 to clear) — both fully reversible, no senescence.
