

EZH2-mediated repression buffers cell-to-cell CyclinD1 variance (PILOT, N=40; scale-free, log-normal setpoint)

(A) CyclinD1 distribution compresses under EZH2 repression

(B) Per cell: high-setpoint cells are pulled down more → variance shrinks

**(C) EZH2 buffers CyclinD1 variance
CV 0.39 → 0.51 (1.28× wider without)**
