

Bimodal G0 p27 emerges from the commitment switch (unimodal birth-p27 $\rightarrow$ 2 modes, $4.7\times$ apart; IF floor 0.12)

(A) 2N (G0/G1) p27 distribution
2 modes, separation $4.7\times$ (data $\sim 4\times$)

(B) Two components = the commitment split
high-p27 uncommitted vs low-p27 committed

(C) Commitment ($E2f\uparrow$) degrades p27;
high-p27 mode = dwelling + arrested
