

EZH2 protein by cell-cycle phase & drug — model vs MB55 single-cell data (scale-free): S-phase peak, HU S-boost, RO3306 removes mitotic halving

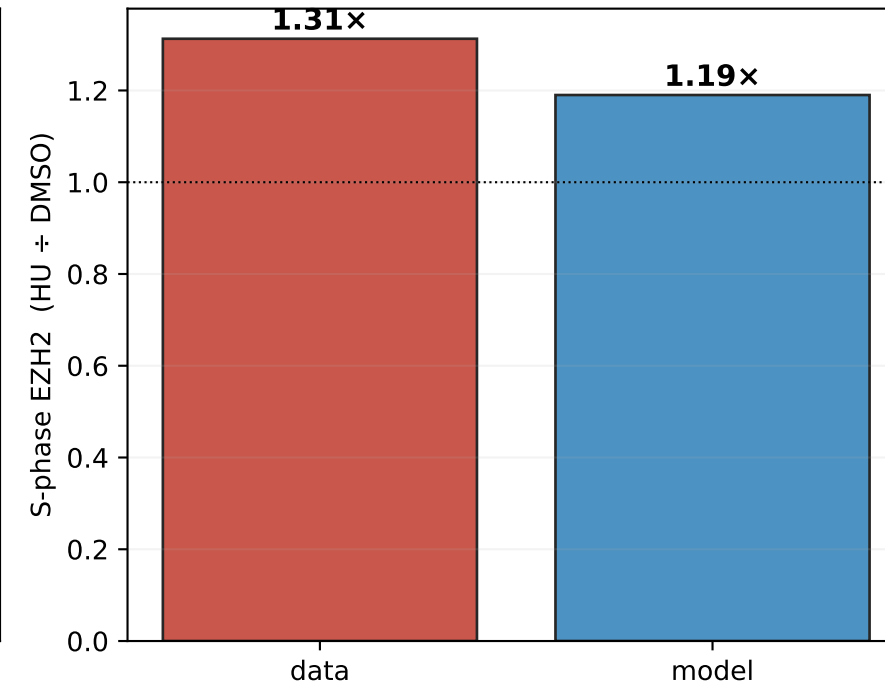

(A) EZH2 by phase — peaks in S
model vs data (scale-free)

(B) EZH2 variability by phase
model vs data

(C) HU boosts S-phase EZH2
(EZH2 integrates S-phase duration)

(D) Drug effects on G2 EZH2
RO3306 (block mitosis) → no halving → ↑
