

Population mitogen ramp — H3K27me3 repression gates cell-cycle ENTRY ($\uparrow$ Hh) and EXIT ($\uparrow$ Hh) (N=120; 3 measured-variation axes)

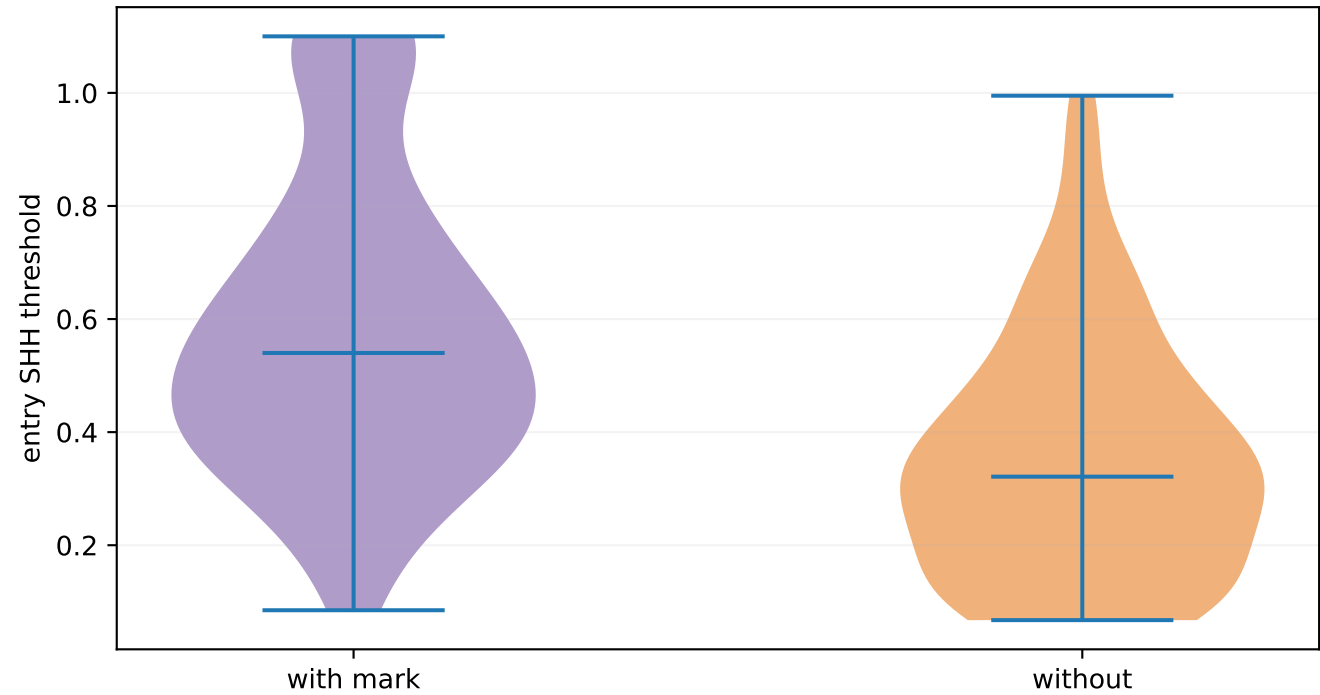

(A) Ramp-ON entry: the mark raises the Hh threshold to start proliferating

(B) Ramp-OFF exit: the mark makes cells exit at higher Hh (earlier on withdrawal)

**(C) Entry threshold distribution
median 0.54 vs 0.32**

**(D) Exit threshold distribution
median 0.46 vs 0.30**
