

H3K27me3 tension — HU-axis (replication stress → S-phase) and MB/vismo variants → CyclinD1 transcript

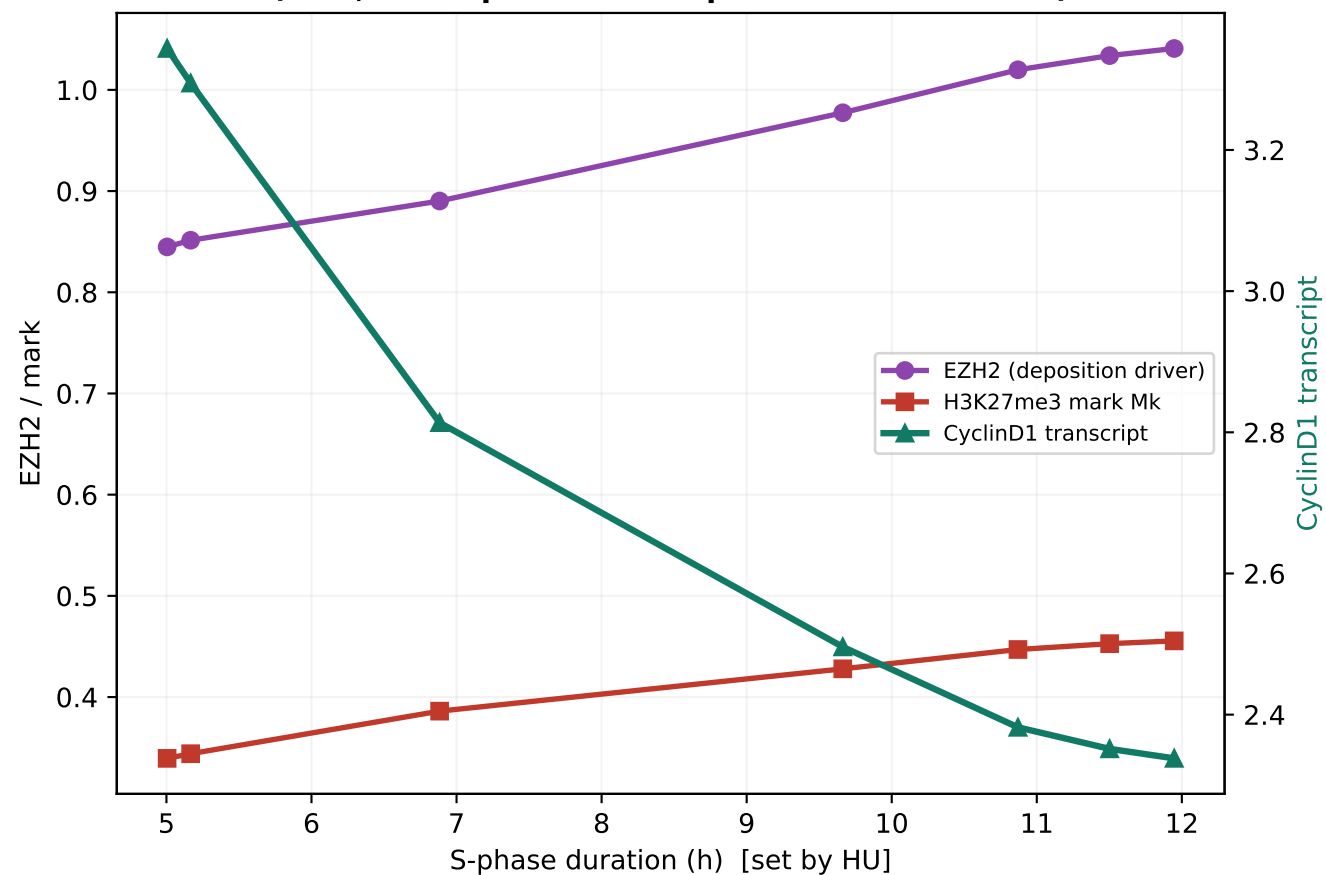

(A) HU-axis tension surface (GNP)
CyclinD1 transcript over mitogen × HU

(B) MB/vismo tension surface
CyclinD1 transcript over vismo × HU

(C) HU elongates S → EZH2 integrates it
(GNP; the experimental replication-stress lever)

(D) Vismo (less mitogen) in MB
Gli-drive ↓ → CyclinD1 ↓ toward the MYCN floor
