

(A) Sudden withdrawal: divisions vs final mitogen feedback gap (shaded) opens at partial withdrawal

(B) Gradual withdrawal: divisions vs final mitogen (SHH ramped 2→level over 60 h)

(C) Per-cell distribution at partial withdrawal (SHH→0.3) feedback → arrest; no feedback → coasting

(D) Representative cell, sudden → SHH 0.3 no-feedback: CyclinD1 stays high → coasts (5 div); feedback: EZH2 represses CyclinD1 → arrests (1 div)
