

Population layer: GNP vs medulloblastoma transient-G0 -- quiescence-onset vs mitogen + Spencer sister concordance

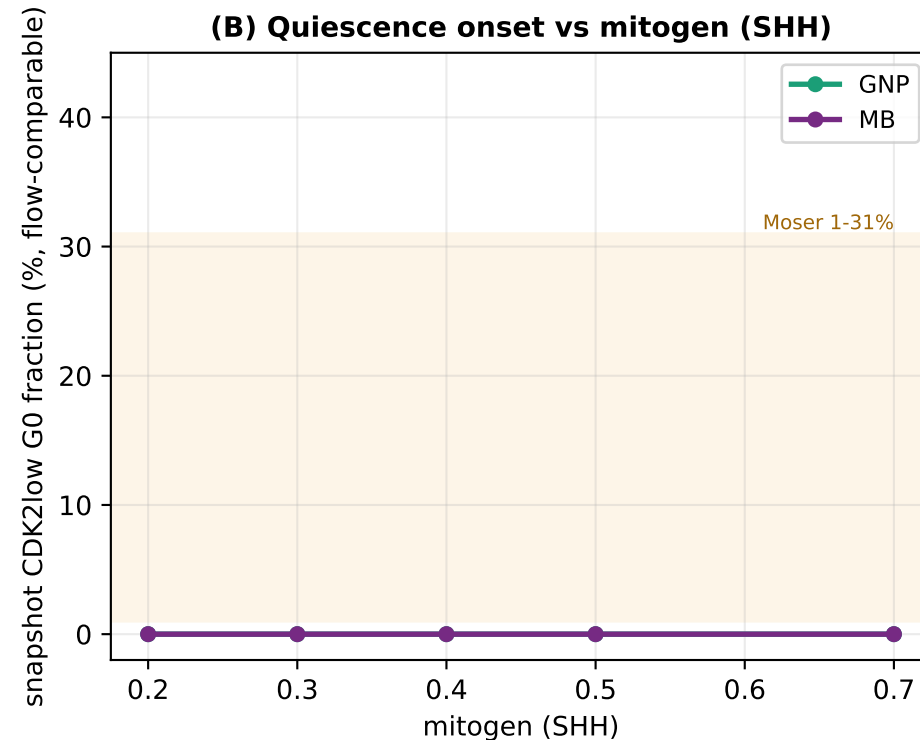

N=100/type. Snapshot G0 = flow-comparable count-fraction, calibrated to JP's flow gate (GNP ~10%, MB ~20%). Spreads kept wide (p27/CyclinD1 quantification untrustworthy); birth-p27 inherited by sisters. Model caps MB near ~22% (per-cell G0 ceiling).

(A) Snapshot G0 fraction (SHH=0.5, flow-comparable)

GNP ~10% vs MB ~20% (JP flow gate)

(B) Quiescence onset vs mitogen (SHH)

(C) Spencer sister concordance
