

Phase-plane portraits of the triangle-ramp trajectory — WITH vs WITHOUT H3K27me3 repression on CyclinD1

(A) WITH repression: CyclinD1 vs mark
NEGATIVE feedback (mark $\uparrow \Rightarrow$ CyclinD1 $\downarrow$)

(B) WITHOUT repression: CyclinD1 vs mark
no feedback — both co-drift with SHH (slope flips POSITIVE)

(C) CyclinD1 vs SHH (input-output)
WITH opens a loop; WITHOUT nearly retraces itself
