

Triangle mitogen ramp — WITH vs WITHOUT H3K27me3 repression on CyclinD1

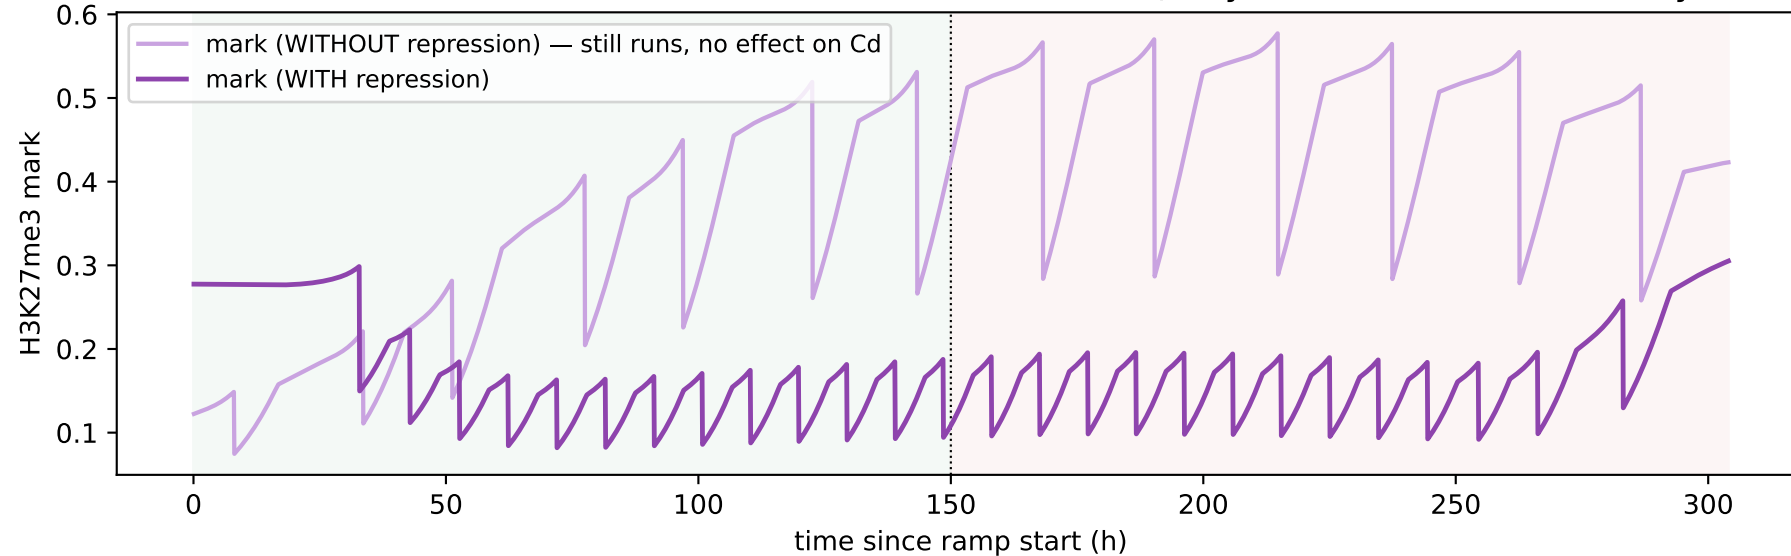

(A) Triangle mitogen ramp (identical for both)

(B) CyclinD1: without the mark it is HIGHER and symmetric up vs down; with the mark it is gated & lags

(C) The mark accumulates in arrest & dilutes with divisions in BOTH; only WITH does it feed back on CyclinD1

(D) Input-output loop
WITH: entry 0.32 / exit 0.09 (loop)
WITHOUT: entry 0.16 / exit 0.07 (retraces — nearly no loop)
