Does division timing set the H3K27me3 plateau? Timing test + top-lever interaction maps — v44.1 (real sims)

TIMING is buffered unless the mark is made PERSISTENT (slow loss) — the strong-memory regime the MB/GNP data exclude. Continuous plateau is set by writer/eraser/turnover KINETICS (maps).

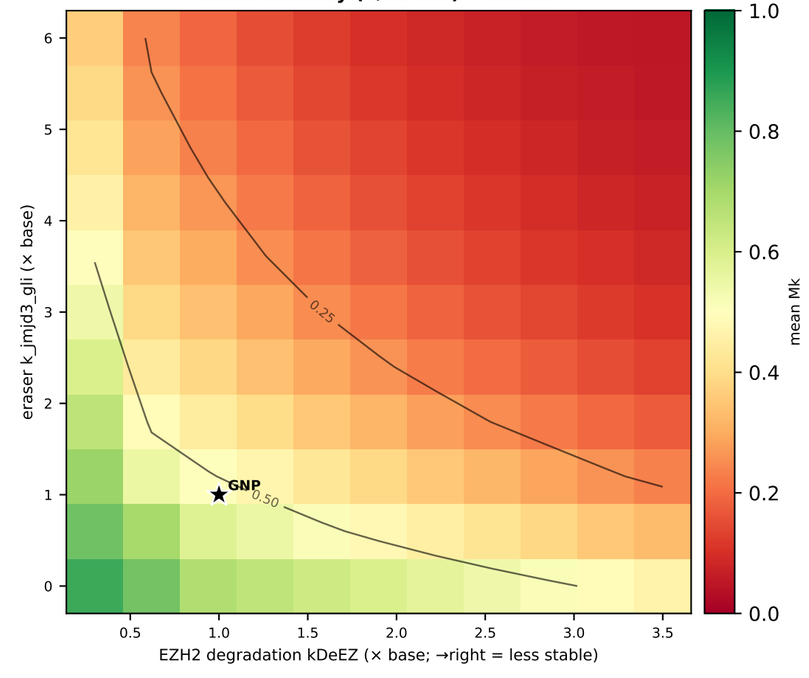

A. Mk vs cycle period, by mark persistence

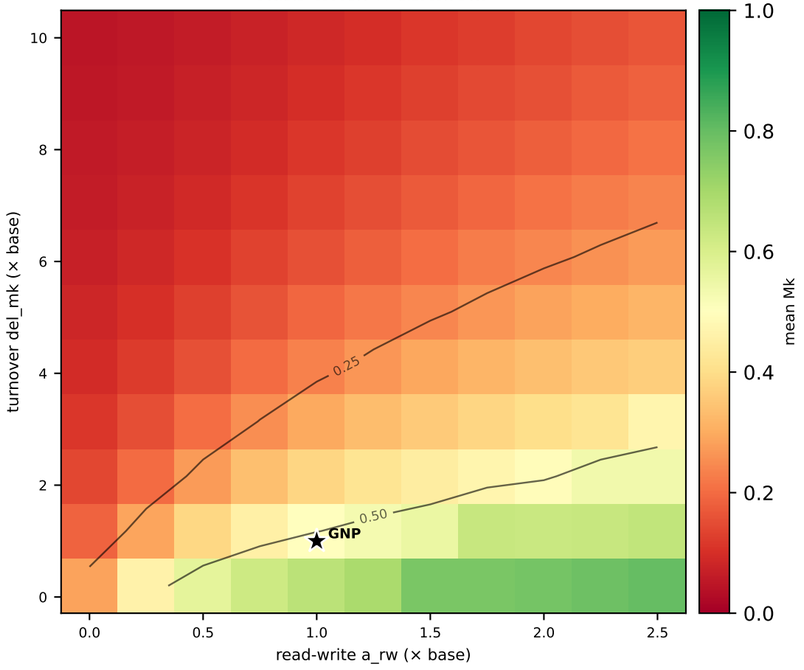

B. What unlocks division-timing sensitivity

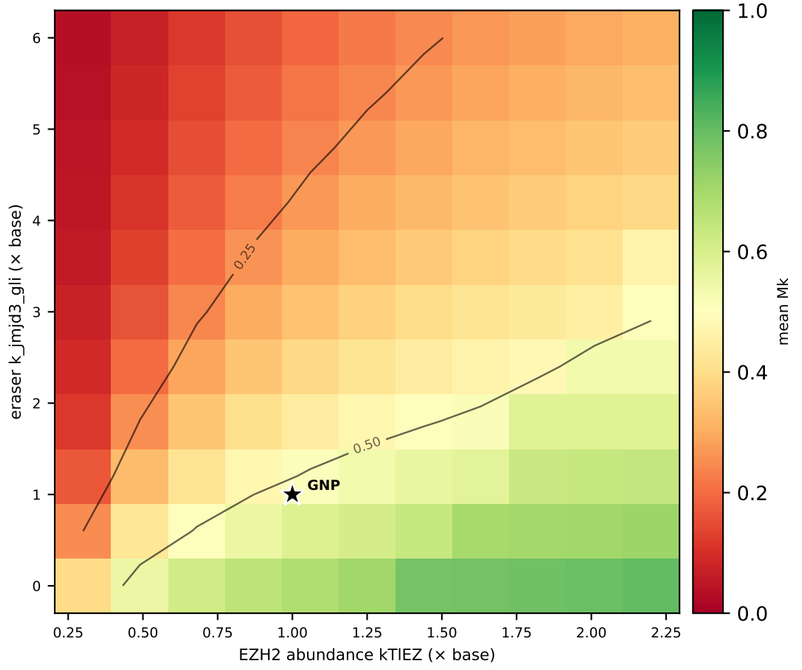

EZH2 stability (1/kDeEZ) × eraser

read-write × turnover

EZH2 abundance × eraser

EZH2 stability × read-write
