A Gli1 step response
GNP adapts (overshoot), MB does not
GNP (intact loop) overshoot 1.27x
MB (broken loop) overshoot 1.00x
Gli1 / steady state
time after SHH step (min)
B Ptch1 mRNA (Gli target) is induced
in both — but functional only in GNP
Ptch1 mRNA (a.u.)
GNP
MB
time after SHH step (min)
C Broken loop in MB: Smo/Gli stay high
despite Gli-induced Ptch1
GNP (Ptch1 functional)
MB (Ptch1 non-functional)
steady-state level (a.u.)
Smo active
Gli activator
