

H3K27me3 → CyclinD1 response characteristics — static transfer functions & parameter sensitivity

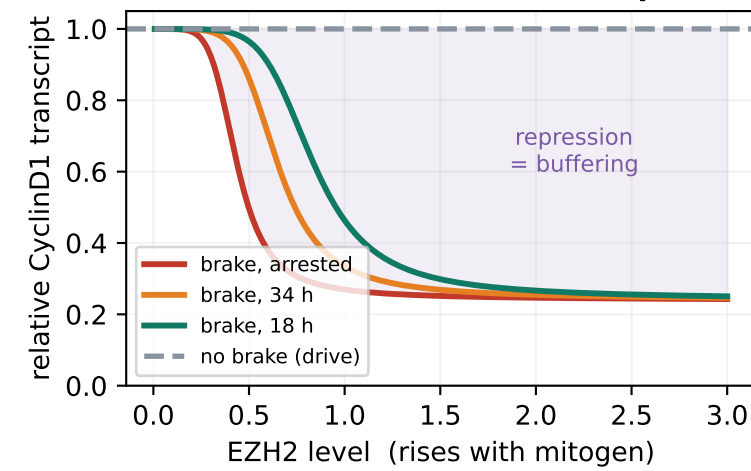

(A) Readout: the mark throttles, never silences (leaky Hill)

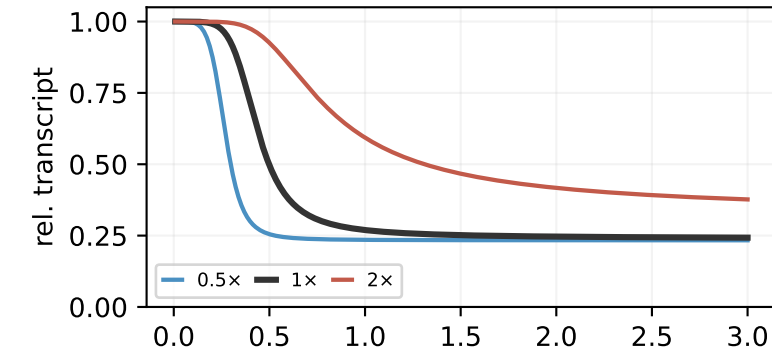

(B) Writing vs erasing: faster cycling dilutes the mark

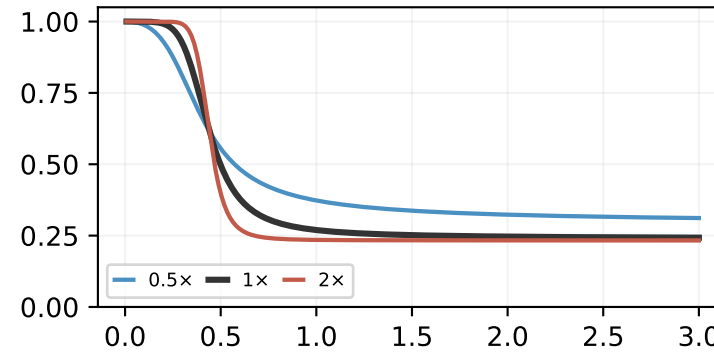

(C) Throttle: more EZH2 → more mark → less transcript

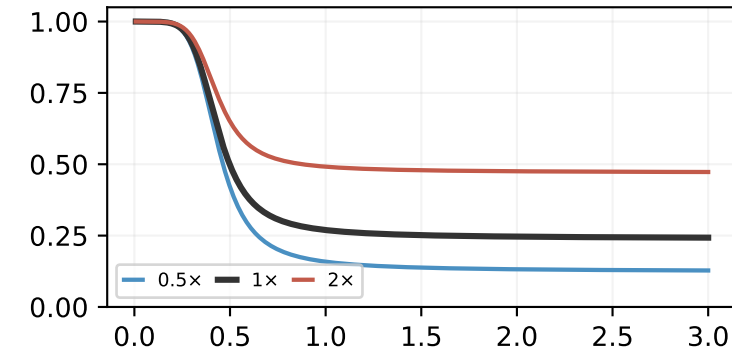

K_mk — mark→repression midpoint

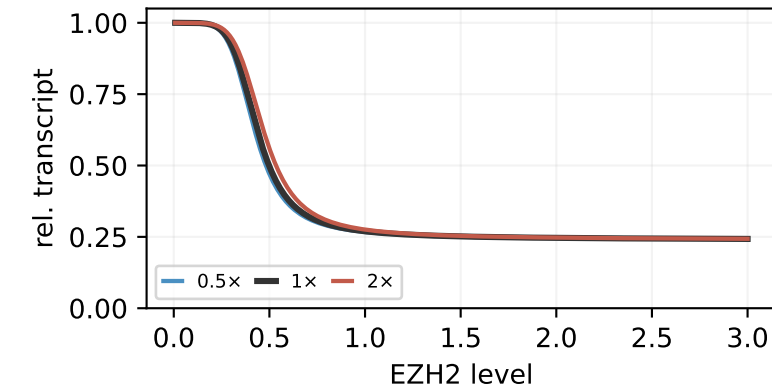

n_mk — switch steepness

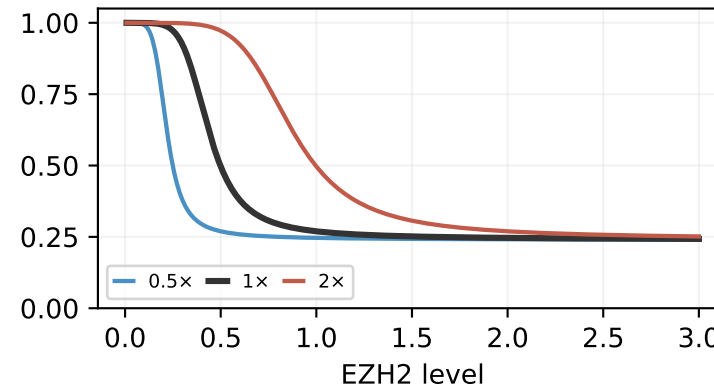

f0_mk — leak floor

g_mk — transcription eviction

del_mk — demethylation / turnover

k_w_mk — read-write autocatalysis
