

**H3K27me3 "battery": fast EZH2 ( $t_{1/2}$ 10h, 25/27) + self-reinforcing mark — charge over divisions, persist through G0, discharge on withdrawal (GNP single cell)**

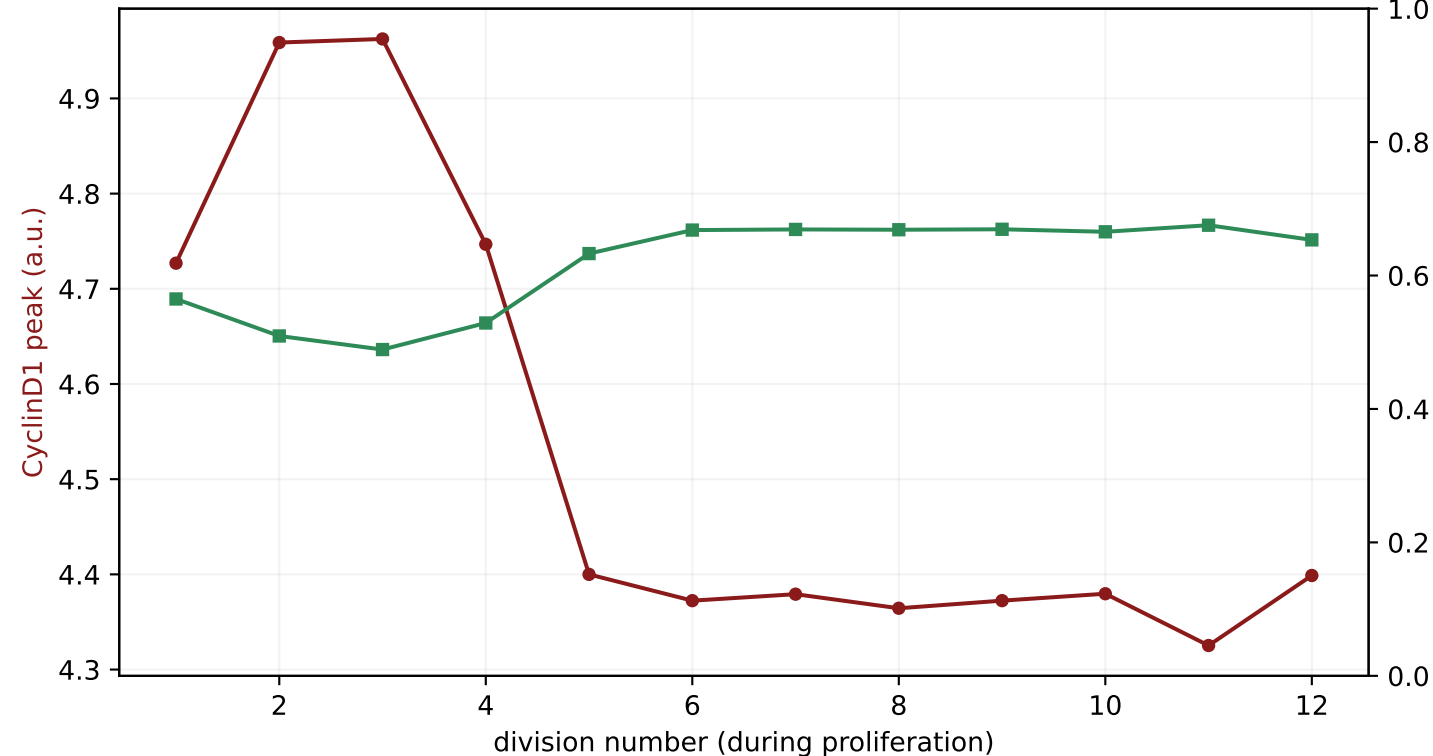

**(A) The BATTERY: mark CHARGES over divisions (green) then persists/DISCHARGES in G0 (red)**

**(B) CyclinD1 sawtooth — envelope DECLINES as the mark charges (harder to push)**

**(C) "Harder to push": CyclinD1 peak falls as H3K27me3 charges over divisions**

**(D) BATTERY DISCHARGE in G0 — durability ( $\text{del\_mk}$ ) sets the memory duration**
