

CyclinD1-SHH hysteresis AREA (smooth metric) — H3K27me3 kinetics & dilution frequency vs mitogen-ramp speed

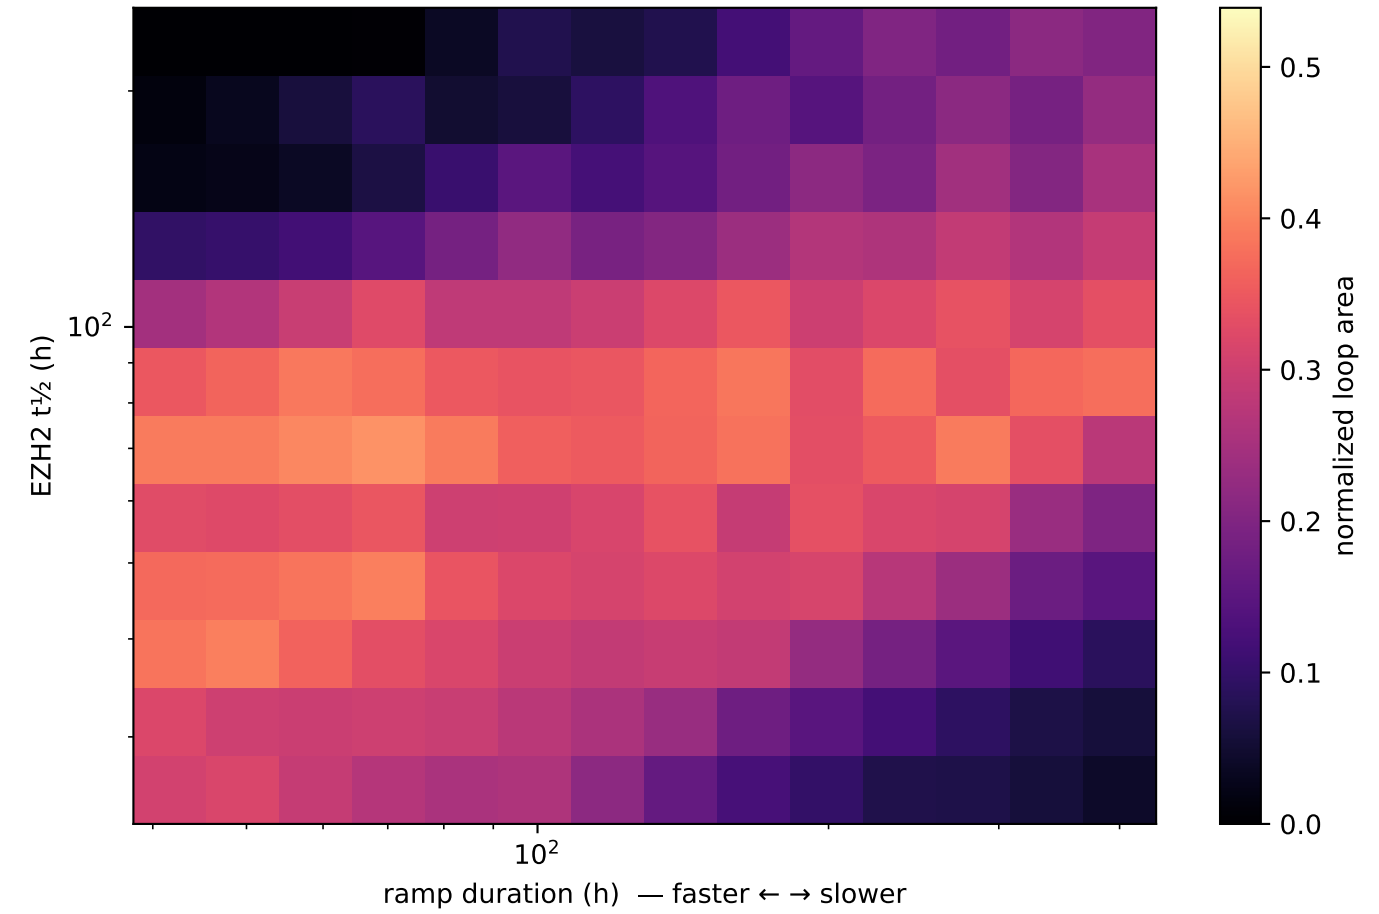

(A) del_{mk} (mark turnover)

loop AREA peaks at INTERMEDIATE timescale; mild fast>slow-ramp tilt

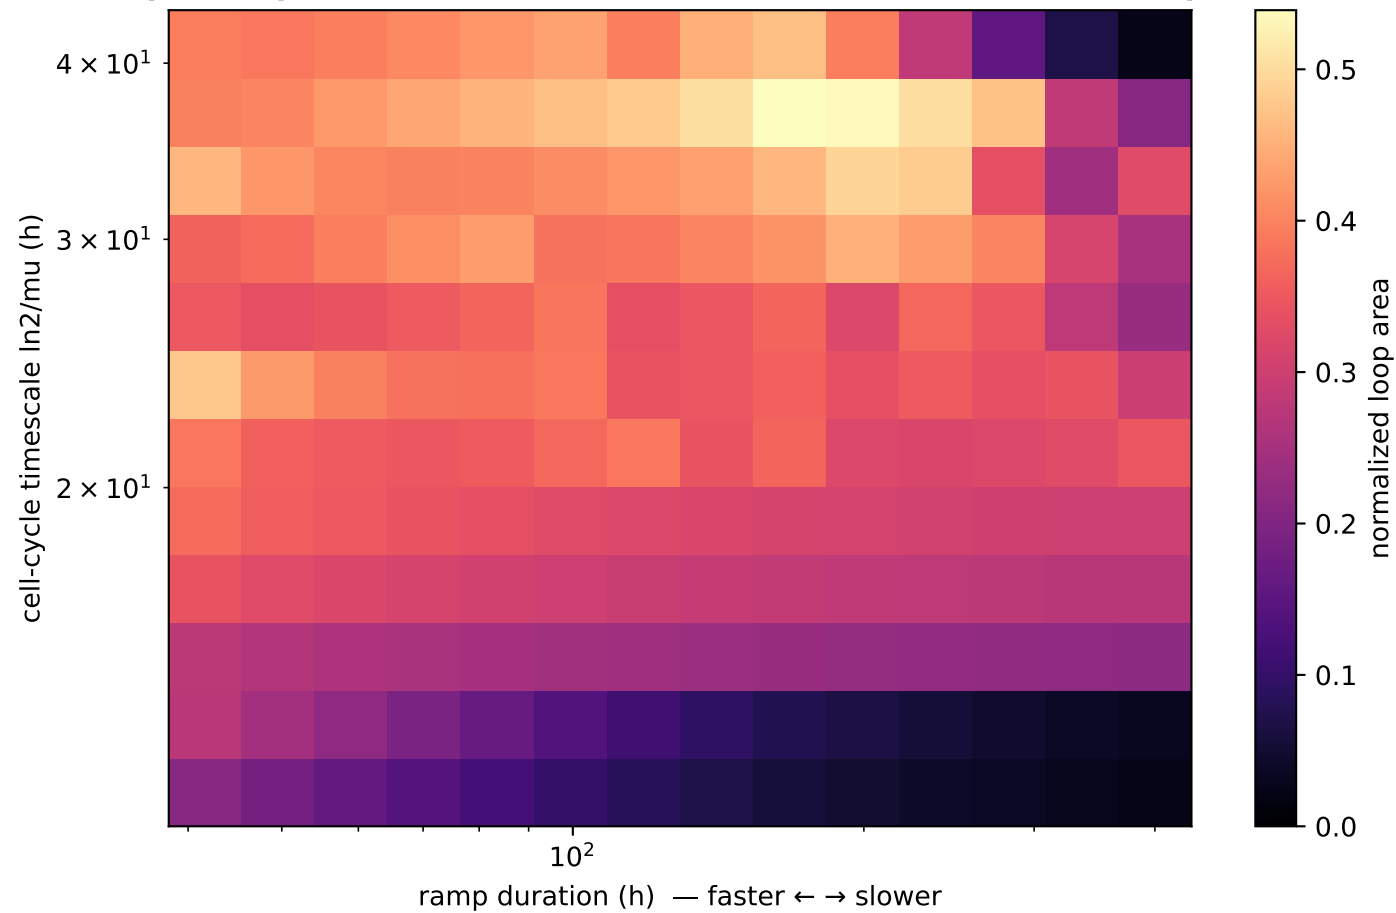

(B) kDeEZ (EZH2 half-life)

loop AREA peaks at INTERMEDIATE timescale; mild fast>slow-ramp tilt

(C) mu (dilution frequency / cycle period)

loop AREA peaks at INTERMEDIATE timescale; mild fast>slow-ramp tilt

(D) The CyclinD1-SHH hysteresis loop (fast ramp 59 h, default timing)
the area between up- & down-ramp is the smooth metric
